

Arete Fire Hose Storage Racks are designed to provide safe, organized, and space-efficient storage for firefighting hoses.

The robust structural steel frame combined with integrated water channels ensures proper drainage and helps maintain hoses in optimal condition after use or drying.

When used together with Arete Hose Drying Cabinets, the racks form a complete and efficient hose maintenance system.

Key Advantages

- Efficient and organized hose storage
- Integrated water drainage system
- Flexible shelf positioning
- Suitable for limited space environments
- Wall-mounted or free-standing configuration
- Quick and easy assembly

Smart & Functional Design

The rack is engineered for flexibility and ease of use:

- Adjustable shelves can be positioned at the required height
- Side fixing elements allow quick and secure shelf adjustment
- Integrated water channels support drainage after hose use or washing
- Compact design allows installation in confined spaces

Flexible Installation Options

- Can be installed as a self-standing unit
- Optional wall-mounted configuration
- Equipped with integrated wheels for mobility

Durable Construction

- Frame: structural steel (1.5 mm thickness)
- Surface treatment: powder coating under ISO standards
- Corrosion-resistant and suitable for demanding environments

This ensures:

- High stability and load capacity
- Long service life
- Resistance to moisture and operational wear

System Integration

Designed to work seamlessly with:

- Arete Hose Drying Cabinets

Creating a complete workflow for:

- Drying
- Storage
- Equipment readiness

Technical Specifications

Parameter	Value
Length	1200 – 1600 mm
Width	600 – 750 mm
Height	1772 – 2000 mm
Number of Shelves	4 – 6
Material	Structural steel (1.5 mm)

Applications

- Fire departments
- Rescue services
- Hose maintenance facilities
- Industrial safety environments
